Kusnierz/MO/R8/USEPA/US@EPA,

Yes, it is the same selection of field sites. Actually there are 2 new columns, both from the Gallatin County roads data: (road) ownership and maintenance.

[GISB\_Owner is from the cadastral data provided by the Base Map Service Center, and relates to the parcel in which the crossing point is found.]

Lisa will have the final word on this. The ownership looks OK to me. I suspect that those TBDs will turn out to be a private road and a state road, but I guess that's "to be determined."

Hi Eric and Lisa,

I think this is the same table that we worked with earlier with a new column for ownership (related to maintenance layer).

I will update the ownership values in the SAP to reflect the following:

15 County  
3 State  
1 Federal + 2 USFS (blank values) = 3 Federal  
2 Bozeman  
2 To Be Determined

We will need to rename our sites. We previously used the GISB\_Owner to determine Federal / State / Private and Local values in the naming convention. The new values can be Federal / State / County / City and TBD.

If you both agree with this, I will send out new sheets for the SAP. I will be out of the office tomorrow, but will return Wednesday!

Thanks,  
Kim

Here is the new Excel sheet. Notice that 2 of the locations are in Park County, and do not have values in the MAINTENANCE field, which comes from the Gallatin Co layer. Both have a SYSTEM attribute of USFS in the transportation framework layer.
